Introduction to Data Science with Python

Alexis Bogroff

May 24, 2022

Presenter

Alexis Bogroff Lecturer and Mentor in Data Science at Paris 1 Panthéon-Sorbonne, ESILV, Openclassrooms, EM-Lyon

Presenter

Alexis Bogroff Lecturer and Mentor in Data Science at Paris 1 Panthéon-Sorbonne, ESILV, Openclassrooms, EM-Lyon

- 4 years Teaching Assistant and lecturer in VBA, Python for finance, SQL, Data Analysis and Data Science
- 9 months Researcher Assistant at Paris 1 Panthéon-Sorbonne within H2020 European Project
- 1 year Data Scientist at Pléiade Asset Management

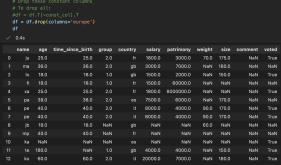

- Select variables (features) drop others
 - Drop constant features

- Impute NAs (NaNs, missing values)
 - Advanced methods
 - Interpolate using a model

- Outliers
 - Extreme values too keep
 - Abberations to delete
 - Variables to transform

Data Management

- Merge tables
 - Concatenation on rows
 - Merge on unique key column
 - Outer (indicator)
 - Left
 - Right, inner

Feature Engineering

- Quantitative variables (numbers representing quantities): create groups
- Qualitative variables (categories): one-hot encode
- Filter

Why using vizualizations

- Quick understanding simple patterns (trend line plot, groups scatter plot)
- Better intuition on complex patterns (CNN weights maps)
- Reporting

Graphs types

- Univariate Analysis
 - Histograms (distributions)
 - Line plots (Time series)
 - Lorentz Curve (inegalities)
- Multivariate Analysis
 - Scatter plots
 - Heatmaps
 - Correlations
 - Confusion matrices

Libraries

- Matplotlib (.pyplot)
- Seaborn for nice default graphs
- Plotly (Dash) for interactive graphs
